## Model for *Pinus pinaster mesogeensis* Sistema Ibérico Meridional (Spain)

### Model

Ppinaster\_me\_sim\_v01

### Model description

- Specie: *Pinus pinaster* Ait. subsp. *mesogeensis*
- Spanish Forest Inventory (SFI) code: 26
- Geographical area: Sistema Ibérico Meridional
- Geographical area (administrative): Soria, Guadalajara, Cuenca y Teruel

### Model type

- Category: growth
- Model level: distance independent individual tree model
- Reproduction methods: seedling forest
- Stand structure: even-aged stands
- Species composition: monospecific stands
- Forest origin: natural

### Model requirements and recommended use

- Initial inventory requirements: age, dominant height and basal area of the plot; expan and dbh of the trees
- Geographical area: Sistema Ibérico Meridional, closer places and another places with similar characteristics (assuming differences)
- Stand type: monospecific stands, resinated or not
- Execution recommended time: 5 years executions (survival, growth and ingrowth equations developed by using that criteria)
- Site Index is defined as top height at a base age of 80 years
