

SIMANF{R

Model for *Pinus halepensis* Middle Ebro Valley (Aragón) and Cataluña (Spain)

Model

Phalepensis_cat_ar_v01

Model description

- Especie: *Pinus halepensis* Mill.
- Spanish Forest Inventory (SFI) code: 24
- Geographical area: middle Ebro Valley (Aragón) and Cataluña
- Geographical area (administrative): Huesca, Zaragoza, Girona, Barcelona, Lleida and Tarragona

Model type

- Category: growth
- Model level: distance independent individual tree model
- Reproduction methods: seedling forest
- Stand structure: even-aged stands
- Species composition: monospecific stands
- Forest origin: natural stands (very high post-fire regeneration)

Model requirements and recommended use

- Initial inventory requirements: age and dominant height of the plot; expan and dbh of the trees. Slope of the plot is needed in order to calculate mushrooms variables
- Geographical area: middle Ebro Valley (Aragón) and Cataluña, closer places and another places with similar characteristics (assuming differences)
- Stand type: monospecific stands
- Execution recommended time: 10 years executions (growth equation developed by using that criteria)
- Site Index is defined as top height at a base age of 60 years
